

REPORT WEEK (11/30/2023)

In this week's update, we focused on getting 3 things working. First get the local server running and receive data, which is working good now. Secondly, we focused on getting the Vibration switch working and controlling the deep sleep which we were ale to do, however still not 100% sure about the sensitivity. Thirdly, got the create 3 moving, using Python SDK.

** Little change in plans, going with quick manual mapping for now.

** Get the website working with the version 1 approach and then play with different algorithms.
